<b>Office Action Summary</b>	<b>Application No.</b> 10/597,745	<b>Applicant(s)</b> YAMADA ET AL.	
	<b>Examiner</b> Marguerite J. McMahon	<b>Art Unit</b> 3741	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

## **DETAILED ACTION**

### ***Election/Restrictions***

Claims 2, 3, 5, and 6 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 10/7/08.

Note that the examiner has considered the foreign references cited in the IFW; however the IDS filed 8/4/06 is not present in the IFW. In other words, there is an entry for an IDS with the date 8/4/06, but it does not show up in the IFW. Please send in the IDS again if you want it to be considered and made part of the record.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Duck (4,355,815). Note a piston assembly for an internal combustion engine comprising a piston body including a top land portion and a ring groove formed on its periphery, and a piston ring having a U-shaped cross section, the piston ring including an upper leg, a lower leg portion, and a base portion 1s connecting the upper and lower leg portions, the piston ring being attached to the top land portion of the piston body, wherein an axial length from a boundary of the base portion of the piston ring and the upper leg

Art Unit: 3741

portion to a lower surface of the lower leg portion is set to be larger than an axial length from an upper surface of the top land portion of the piston body to a lower surface of the ring groove into which the lower leg portion of the piston ring is fitted. See Figs 1-4.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Duck (4,355,815) in view of Nishimura (JP 5-47615, cited by Applicant). Duck shows everything except employing a barrel face shape on the upper periphery of the piston ring. Nishimura teaches that it is old in the art to employ a barrel face shape 1d on the upper periphery of the piston ring. It would have been obvious to one having ordinary skill in the art to modify Duck by employing a barrel face shape on the upper periphery of the piston ring in order to improve oil scraping with minimal friction.

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
